PROJECTS

GeoSeek

– With GeoSeek, users go on adventures finding awesome things around the town or wherever users are.
– Developed using ReactJS, Redux, MapBox, for forms, the map, and scalable state management.
– NodeJS, Express, Knex, for endpoints, and scalability of the backend.

MUD Game

– This is a multi user dungeon game. Users can move from room to room finding treasures and enemies.
– Developed using ReactJS, for the map, register, and login pages. Python, Django, for database, and traversal of rooms.
– Required to have a minimum of 100 rooms. developed multiple algorithms to generate rooms, the paths connecting the rooms, and being able to traverse from room to room.
